PROFESSIONAL SUMMARY

Hi there, I am Yash. I love football and I love development. Beginning as a self-taught developer is not easy but consistency and smart work can make something out of you. I love to explore new techs, new languages, new libraries but stick firmly to what I know the best - JavaScript (MERN). I always choose something new for my next project so that I become comfortable in a daily evolving tech world. HARD RULE - Saturday and Sunday is not time-off, it is for learning something new. Bye. :)

EMPLOYMENT HISTORY

Mar. 2021 – Present

Mobile developer, Softway Solution

I was responsible to fix bugs in a Goodman (Daikin) BLE App built in Swift. I am now involved in revamping the whole project in React Native.

Jun. 2021 – Aug. 2021

Backend Developer, Lazarus Network

Using Go, I built a backend for a cyber security company which leveraged smart contracts. I worked with Fiber and Gorm to complete things here. It was an open source community.

Nov. 2020 – Jun. 2021

AWS Serverless (Fullstack) Developer, StartWithGenesis

AWS was an amazing experience for me. I used almost every major services like Cognito, Lambda, SNS, Event Bridge, etc. Made me read docs more carefully and efficiently. In the end, it was worth all the head scratching moments which lasted for hours. Also, I did built the admin panel in React.

Dec. 2020 – Mar. 2021

PWA Full Stack Developer, Dezigndia

I was kinda tech-lead here because I was the only one with PWA experience. I assigned tasks to fellow developers. Being a full stack developer is fun.You are working on React one day and on Node the other day.

Nov. 2020 – Jan. 2021

Frontend Developer, WouldBee

Here, I built an admin panel in React from scratch. One of the first "real developer" jobs I took and I am still proud of this.

Aug. 2019 – Oct. 2020

Customer support/Jr. Dev, Viewerlabs

I was a customer support guy (an Indian as a customer support, how unoriginal) in a company from UK. Here, I learned to deal with international clients and later acted as a Jr. developer to the devs there. I learned the basics of web and dealt with clients plus understood the development better and better day by day.

EDUCATION

Present

Bachelor of Technology: Computer Science

- Future Institute of Engineering and Management - Kolkata, West Bengal
